1. The card shows the amounts of fat and fibre in some types of food and drink from a café.

<table>
<thead>
<tr>
<th>Chez Jean Café</th>
<th>fat in g</th>
<th>fibre in g</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>type of burger</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>single burger</td>
<td>17</td>
<td>0.8</td>
</tr>
<tr>
<td>double burger</td>
<td>38</td>
<td>1.2</td>
</tr>
<tr>
<td>cheeseburger</td>
<td>21</td>
<td>1.0</td>
</tr>
<tr>
<td><strong>type of drink</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>strawberry milkshake</td>
<td>8</td>
<td>0</td>
</tr>
<tr>
<td>medium cola</td>
<td>0</td>
<td>0</td>
</tr>
<tr>
<td>medium orange juice</td>
<td>0</td>
<td>0</td>
</tr>
<tr>
<td><strong>type of potato</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>regular fries</td>
<td>15</td>
<td>3</td>
</tr>
<tr>
<td>baked potato</td>
<td>0</td>
<td>9</td>
</tr>
</tbody>
</table>
(a) From the card above, choose a meal consisting of a burger, a drink and some potato, to give:

(i) the least fat;  

(ii) the most fibre.

Write your answers in the table below.

<table>
<thead>
<tr>
<th>Food and drink</th>
<th>meal with the least fat</th>
<th>meal with the most fibre</th>
</tr>
</thead>
<tbody>
<tr>
<td>type of burger</td>
<td></td>
<td></td>
</tr>
<tr>
<td>type of drink</td>
<td></td>
<td>the drinks do not contain fibre</td>
</tr>
<tr>
<td>type of potato</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

(b) Draw a line from each nutrient to the main reason why it is needed. Draw only four lines.

<table>
<thead>
<tr>
<th>nutrient</th>
<th>main reason why the nutrient is needed</th>
</tr>
</thead>
<tbody>
<tr>
<td>calcium</td>
<td>• to keep the intestine working properly</td>
</tr>
<tr>
<td>fibre</td>
<td>• for healthy teeth and bones</td>
</tr>
<tr>
<td>protein</td>
<td>• for insulation</td>
</tr>
<tr>
<td>sugar</td>
<td>• to provide energy</td>
</tr>
<tr>
<td></td>
<td>• for growth and repair</td>
</tr>
</tbody>
</table>

2. In the experiment shown below, metal and acid react together to make hydrogen gas.

(a) Look at the flask. How can you tell that a gas is being produced in this experiment?

........................................................................................................................................ 1 mark

(b) (i) Hydrogen gas passes through the water and collects in the test-tube. What does this tell you about hydrogen? Tick the correct box.

It dissolves in the water. [ ] It does not dissolve in the water. [ ]

It is acidic. [ ] It is alkaline. [ ]

1 mark

(ii) What happens to the level of the water in the test-tube as hydrogen is produced?

........................................................................................................................................ 1 mark

(c) Air contains the following gases:

- nitrogen
- oxygen
- water vapour
- carbon dioxide
Choose from these gases to answer the questions below.

(i) Which one of the four gases do we need to take into the blood in the lungs?

........................................................................................................... 1 mark

(ii) Which one of the four gases can produce droplets on a cold window?

........................................................................................................... 1 mark

Maximum 5 marks

3. The diagram shows some of the organs of the human body.

(a) Give the names of two labelled parts where food is digested.

................................................................................................. and ................................................................. 1 mark
(b) Why do we need to chew our food and mix it with saliva?

..........................................................................................................................................................
..........................................................................................................................................................
..........................................................................................................................................................
..........................................................................................................................................................
2 marks

(c) (i) Draw one line from each bad habit to the organ it harms.

<table>
<thead>
<tr>
<th>bad habit</th>
<th>organ</th>
</tr>
</thead>
<tbody>
<tr>
<td>drinking too much alcohol</td>
<td>liver</td>
</tr>
<tr>
<td>not eating enough fibre</td>
<td>lung</td>
</tr>
<tr>
<td>smoking cigarettes</td>
<td>ribs</td>
</tr>
<tr>
<td></td>
<td>intestine</td>
</tr>
</tbody>
</table>

3 marks

(ii) Which organ in the list below can be harmed if we eat too much fat? Tick the correct box.

<table>
<thead>
<tr>
<th>brain</th>
<th>heart</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td>lung</td>
<td>ribs</td>
</tr>
</tbody>
</table>

Maximum 7 marks
4. People who have emphysema have damaged air sacs in their lungs. The diagrams show a section through a normal air sac and a section through a damaged air sac.

(a) Gas exchange takes place at the inside surface of the air sac when a person breathes.

(i) Which two gases are exchanged at this surface of the air sac?

..............................................................................................................

..............................................................................................................

1 mark

(ii) The amount of gas exchanged is smaller in a damaged air sac. Explain why.

..............................................................................................................

..............................................................................................................

..............................................................................................................

1 mark

(b) The list shows four substances present in cigarette smoke.

carbon particles  carbon monoxide  nicotine  tar

Choose from the list the substance which:

(i) causes addiction to smoking cigarettes;

..............................................................................................................

1 mark
(ii) may cause lung cancer;
.........................................................................................................................................................
1 mark

(iii) is carried instead of oxygen in the red blood cells.
.........................................................................................................................................................
1 mark

Maximum 5 marks

5. Peter burns a piece of crispbread to find out how much energy is stored in it. Energy
from the burning crispbread raises the temperature of the water in the test-tube.

(a) Describe one way Peter has arranged the apparatus so that he is working safely.
.........................................................................................................................................................
.........................................................................................................................................................
2 marks

(b) Peter wants to find out if potato crisps contain as much energy as crispbread. He
does the experiment again using a piece of potato crisp.

Suggest two things he must do to make the experiment a fair test.

1. .........................................................................................................................................................

2. .........................................................................................................................................................

1 mark
The table shows some of the nutritional information from a packet of crispbread and a packet of potato crisps.

<table>
<thead>
<tr>
<th></th>
<th>energy in kJ</th>
<th>protein in g</th>
<th>carbohydrate in g</th>
<th>fat in g</th>
<th>fibre in g</th>
</tr>
</thead>
<tbody>
<tr>
<td>100 g of crisp bread</td>
<td>1455</td>
<td>11.6</td>
<td>58.1</td>
<td>7.3</td>
<td>14.7</td>
</tr>
<tr>
<td>100 g of potato crisps</td>
<td>2072</td>
<td>5.8</td>
<td>57.9</td>
<td>28.7</td>
<td>4.3</td>
</tr>
</tbody>
</table>

(c) Peter burns 1.0 g of potato crisp instead of 1.0 g of crispbread in a similar experiment. What result will he get when he burns the potato crisp? Tick the correct box.

- The change in the temperature of the water will be greater. [ ]
- The change in the temperature of the water will be the same. [ ]
- The change in the temperature of the water will be smaller. [ ]
- There will be no change in the temperature of the water. [ ]

1 mark

(d) (i) Fibre contains energy. Explain why this energy can **not** be used by the human body.

..................................................................................................................................................
..................................................................................................................................................
..................................................................................................................................................
..................................................................................................................................................
..................................................................................................................................................

1 mark

(ii) Use the table in part (b) to give **two** reasons for choosing crispbread rather than potato crisps as part of a balanced diet.

1. ...........................................................................................................................................
...............................................................................................................................................
2. ...........................................................................................................................................
...............................................................................................................................................

2 marks
(e) Crispbread does not contain vitamin C. Which of the foods in the list below is the best source of vitamin C?
Tick the correct box.

| cheese | eggs | fish | oranges |

Maximum 8 marks

6. The words ‘contains added iron’ were printed on Colin’s box of cereal.

(a) Colin decided to test the cereal to see if it contained tiny pieces of powdered iron metal.

First he crushed 500 g of cereal into a fine powder and mixed it with water.

He put a clean, white, plastic-coated magnet in the mixture. Then he stirred it.

If the cereal contains tiny pieces of iron metal, what should Colin expect to see?

........................................................................................................................................................................

........................................................................................................................................................................

1 mark

(b) Colin finds that the cereal does contain pieces of powdered iron. Give two differences between iron metal and compounds containing iron.

1. ........................................................................................................................................................................

........................................................................................................................................................................

2. ........................................................................................................................................................................

........................................................................................................................................................................

2 marks

(c) Colin eats some cereal. The tiny pieces of iron metal in the cereal react with the hydrochloric acid in his stomach.

Complete the word equation to show the reaction of iron with hydrochloric acid.

iron + hydrochloric acid → ........................................ + ........................................

2 marks
The body needs iron to make red blood cells. The red blood cells transport oxygen to all the cells of the body. People who do not have enough red blood cells may feel that they do not have much energy. Explain why.

........................................................................................................................................

........................................................................................................................................

........................................................................................................................................
